Congress of the United States

House of Representatives Washington, DC 20515—3012

April 10, 2015

Honorable Tom Wheeler Chairman Federal Communications Commission 445 12th Street SW Washington, DC 20554

Dear Mr. Wheeler,

I respectfully request that you improve the Amtrak Police Department's capacity to keep riders throughout the Amtrak system safe by granting them access to public safety frequencies. This would enable Amtrak police to effectively communicate and share data with other law enforcement agencies when needed, especially in times of crisis.

The Amtrak Police Department currently operates on an antiquated radio frequency spectrum that prevents Amtrak police officers nationwide from communicating with local, state, and federal law enforcement agencies. Over a decade ago, incompatibility of radio systems were blamed for some of the confusion among first responders to the World Trade Center tragedy. Since that time, interoperability, or the ability of agencies to talk and exchange information in real time, has been identified as a high priority in public safety.

The Amtrak Police Department is on the frontlines of the fight to ensure the safety of the nearly 2 million riders who board Amtrak Trains annually and the millions of residents who live in cities along the Amtrak corridor. Amtrak Police personnel have been an invaluable resource to local, state, and federal law enforcement, as evidenced by the "Operation RAILSAFE," a coordinated effort between the Amtrak Police Department, the New York City Police Department, and the Transportation Security Administration that provides heightened station and right of way patrols, increased security presence onboard trains, explosive detection canine sweeps, random passenger bag inspections, and counter-surveillance. The success of this program demonstrates the necessity of interoperability between Amtrak and various law enforcement agencies. Amtrak patrol officers are often first responders in times of crisis. They are expected to be visible, deter crime, enforce laws, and conduct follow-up investigations. Yet, if an emergency occurs, Amtrak officers are unable to utilize their radio technology to seek support from local law enforcement agencies.

Optimizing transportation security is important for cities like Philadelphia, where transportation needs are increasing. In September 2015, Pope Francis and the World Meeting of Families will meet in the city of Philadelphia. The events around this convening are expected to attract two

million visitors to the city. Additionally, Philadelphia will host the 2016 Democratic National Convention during the week of July 25, 2016 which will significantly increase congestion, movement, and the need for safe transportation. It is imperative that Philadelphia and cities across the country are able to communicate and respond adequately in the event of an emergency. By granting the Amtrak Police Department access to public safety frequencies, we ensure public safety.

First responders of all kinds need access to effective, reliable wireless communications with other public safety agencies when responding to dangerous situations on our railways. To this end, public safety radio communications and interoperability are critical to the safety and well-being of our officers and the public.

I urge the Commission to amend Title 47 of the Code of Federal Regulations in sections 90.20, 90.617, and 90.523 to allow Amtrak Police the necessary authority to license and operate on 700, 800, or 900 MHz interoperability frequencies.

Sincerely,

BONNIE WATSON COLEMAN

U.S. House of Representatives

New Jersey Twelfth District

FEDERAL COMMUNICATIONS COMMISSION WASHINGTON

July 23, 2015

The Honorable Bonnie Watson Coleman U.S. House of Representatives 126 Cannon House Office Building Washington, D.C. 20515

Dear Congresswoman Coleman:

Thank you for your letter requesting that the Commission reexamine the radio frequency spectrum currently assigned to the Amtrak Police Department. Your views on this issue are very important to us.

In that regard, I recently circulated a draft Notice of Proposed Rulemaking (NPRM) to my fellow Commissioners that addresses the issue you raise. The draft NPRM builds on a petition for rulemaking filed by the National Public Safety Telecommunications Council (NPSTC), which urges the Commission to permit railroad police, including Amtrak police, to use interoperability and mutual aid channels in several public safety spectrum bands for the purpose of communicating with state and local law enforcement officials in railroad-related emergencies.

I appreciate your interest and will be happy to keep your office updated on additional action that the Commission may take in this matter. Please let me know if I can be of any further assistance.

Sincerely,

Tom Wheeler
